

Module 1 - Video 11

How to Install Themes

Transcript:

In this specific video, I'm gonna show you how to install themes in WordPress. You're gonna need the WordPress theme in hand and there's also two different ways in installing theme. You can do so automatically through the dashboard itself or manually through a free FTP software such as Filezilla.

How to Install New Themes

Changing the look and design of your Wordpress site is as simply as installing and activating a theme. That's one of the powerful features of Wordpress. No more spending hours or days trying to change your design.

In this specific video, I'm gonna talk about how you can install themes. Obviously, first things first you're going to need a theme. To do that, all you need to do is simply go to Appearance and Themes. Next, you can go to Add New theme or you can search installed themes here. If you click on Add New theme, you'll be able to find themes that are free that are part of the WordPress directory by searching for the theme here. You can also do a search for a theme and these are all free. You can search for popular themes, latest themes, and if

you click on Feature Filter, you'll be able to specify the colors, the layout, the features, and the different type of subjects of themes.

What's amazing about WordPress themes is changing a theme is super-easy. Currently, I am looking at the live site and if I simply want to change the theme to this particular theme, all I need to do is simply click on Install, click on Activate, and if I go to the live site and refresh the page, you can see that the theme has changed. If you have a theme already in hand and you've downloaded that from a website, all you need to do is simply click on Add New, click on Upload Theme if you have the zip file, click on Choose File, and locate that particular zip file, click on Open, click on Install Now, click on Activate, and this is the theme. If you take a look at the live site here, the theme has changed.

And last but not least, if you want to install a theme by FTP, all you need to do is simply locate WordPress directory and keep in mind that if you just want to learn how to install it through the dashboard, you're done. You don't have to watch this. Stop the video right now. But if you wanna learn how to upload it via FTP, you will need to locate your WordPress directory. Click on wp-content, click on Themes, and simply upload the theme here. Then once that's uploaded, you'll refresh the page here, and you'll see the theme and all you have to do is simply click on Activate. When we refresh the page, you're able to see the brand new theme. As you can see, those are multiple ways of installing themes on WordPress.

Thank you,
